命題系所: 牙醫學系碩士在職專班
考試科目: 牙醫學

以 PPT 檔顯示圖片 共 2 頁

Case history:

Patient: **YL. W**, a 37 years old female

Occupation: private company's administrative assistant

Medical history: non-contributory

Drug history: no known allergy or side effects to medications or food

Dental history: had many different dental treatments in the past and was told to have severe periodontal problems over the past few years.

Chief complaint: My gums bleed when brushing and sometimes they feel discomfort in the past few months. Now, I like to have my gums and teeth fixed and get back to the normal state and condition whatever the costs might be!!

Slides included:

- 1) Pre-treatment dental x-rays & panoramic film
- 2) Pre-treatment brief periodontal charting from referring local dentist

Questions to be answers below:

- 1) **Clinical diagnosis (10%: list "all that you can see and investigate here in this case)**
- 2) **Disease etiologies (5%):**
- 3) **Prognosis (5%):**

4) **Your treatment plan (40%)**

(such as periodontal, restorative, prosthetic treatments, and implants, etc.; and list and describe all of your treatment plans in as much details as you can!!)

5) **Describe your possible treatment options and why (the reasons) you chose for such recommended treatment for this patient (10%)**

6) Among all the treatment options, do you recommend periodontal surgeries for this patient?? If so, why? (explain the reasons and advantages of your surgical therapy) (10%)

7) What findings would you consider while evaluating the results of therapy? (5%)

8) Maintenance therapy (15%: each sub-question 5%)

1. What is the purpose of the maintenance?
2. What factors should be considered in developing a maintenance protocol and therapy for this patient?
3. How do you determine the maintenance interval? and what is done during each maintenance interval?
